- Storage time: 3-4 weeks
- Storage temperatures: 2°C

2. Dried Fruits

Drying is the use of high temperatures to dry the product in the drying chamber so that the product evaporates.

The main principle of the plastic drying process is that the drying chamber is maintained at a temperature of 50 - 70 ° C, equivalent to the drying temperature in the sun. At that time, the steam in the product began to evaporate and the product gradually dried up. To a certain degree of dryness, the product is given cooling and packaging.

Flexible drying products do not use frying oil or dip through oil so there is absolutely no oil or caramelization. After drying, the product retains its softness, flexibility, natural fruit flavor and is not as brittle as vacuum sublimation drying.

Vina Nature specializes in providing flexible dried fruit products in the tropics such as: dried mango, dried dragon fruit, dried papaya, dried jackfruit, dried passion fruit, dried pineapple, dried guava, dried coconut, etc. The products after processing still retain the nutritional content.

>>> DRIED MANGO

- Origin: Vietnam

4. Smoothies and fruit juice

A delicious drink, easy to prepare and very good for your health is making smoothies and juices from fruits. Smoothies and fruit juices are a great option for those who do not have the conditions or time to eat enough green vegetables or fruits to ensure adequate nutrition. This is also a good alternative for those who do not like to eat fruit directly. In particular, because the juice has a high nutrient content, just one small cup is enough to provide an amount of nutrients equivalent to a few servings of fruits and vegetables, both saving time and being easy.
